Investment Points

WA copper focus: FY11 exploration budget \$5m: 90% directed to Pilbara VMS copper (drilling 20,000m).

Scoping study and resource upgrade expected 4Q10. BFS and development decision expected 2Q11.

Substantial infrastructure in place. Low capex ~A\$70m.

Pilbara VMS: Open pit ore reserves: 3.47mt @ 2.2% Cu Eq (Whim Creek and Mons Cupri pits) - support first 5 years mine life. C1 costs <US\$1.00/lb Cu Eq*.

VXR has defined 5 deposits to date. VMS districts of similar scale typically contain 8-19 economic deposits.

Exploration upside on 36km prospective VMS horizon; and at depth (>150m). Multiple drill ready targets.

Drilling Mons Cupri corridor 4Q10 (5,000m) - potential for significant open pit resource additions (+2.5mt, +50%) - extending low cost, open pit mine life by 1-3 yrs.

Blue sky gold discovery potential in Brazil.

Company Comment

Overview: VXR listed on the ASX April 2007. Lead projects are VMS base metals in the Pilbara. It purchased Whim Creek and Salt Creek from Straits Resources (ASX:SRL) Aug '09 for \$8m in shares (on deal closure) and \$3m in shares or \$3.5m cash on decision to mine.

Pilbara VMS province (WA): 120km from Port Hedland. VXR holds 3 project areas prospective for VMS base metals, viz, Whim Creek, Salt Creek and Liberty-Indee; within 25km of Whim Creek Mining Lease where a previous open pit (2004/5, SRL), crushing circuit, and infrastructure are situated; 5km to electric grid. The Pilbara deposits occur in clusters, are shallow dipping, undulating planes, not difficult or expensive to explore at increasing depths. VXR has high potential for discovery of additional pods as limited exploration has occurred at depths below 150m, and from surface where there are numerous gossans. **Scoping Study:** Expected 4Q10 (Snowden) for a centralized plant producing Cu, Pb and Zn concentrates at Whim Creek. Expected capex A\$50m to A\$80m. The study is drawing on feasibility work completed by Straits in 2007. Proposed production rate is 600ktpa grading over 2% Cu Eq from 1Q12. LOM 8 years. Initial production is expected from open pit mining at Mons Cupri, Whim Creek and Evelyn in years 1-5; and subsequently from high grade underground ore at Salt Creek in years 5 - 8. There is good potential to extend open pit life, by 1 to 3 years, especially in the Mons Cupri corridor.

Whim Creek: contains the main Mons Cupri resource (4.94mt, 58% of total resource) - the sulphide zone is open at depth (below 250m), to the north and northwest. Resource upgrade Sep '10 added 67% to in-pit reserves and +54% to Whim Creek pit reserves. **Liberty-Indee project:** 12km VMS horizon with multiple gossans at surface. **Salt Creek project:** Potential for selective, narrow vein underground mining. High grade zinc - drill intercepts include 4.75m @ 47.8% Zn 2Q10.

Whim Creek Heap Leach: (VXR 50%, free carried) Small-scale SX-EW (operated by WASC0) to produce 1-2ktpa Cu cathode from 1Q11. LOM 2-3 years. Potential cashflow to VXR ~\$3mpa.

Brazilian gold projects: Generating a lead gold project. VXR team and properties in place. Rio Pombo: large soil anomaly; good trenching results, further trenching underway; targeting granite hosted system.

Investment Comment: VXR offers exploration upside with production visibility 1Q12 and leverage to the rising copper price. The company is trading at a 50-70% discount to preliminary estimates of project NPV: >A\$100m at a copper price of US\$3.00/lb and >A\$150m at spot copper price (~US\$3.75/lb). Drilling Oct '10 northwest of Mons Cupri with potential for significant resource additions (+2.5mt, +50%). Further resource and reserve revisions imminent for Salt Creek and Evelyn deposits.

Analyst Certification: All observations, conclusions and opinions expressed in this report reflect the personal views of RCR analysts and no part of the analyst’s or RCR’s compensation was, is, or will be, directly or indirectly related to specific recommendations or views expressed in the report. Officers, directors, consultants, employees and independent contractors of RCR are prohibited from trading in the securities of U.S. companies that are, or are expected to be, the subject of research reports or other investment advice transmitted to RCR clients for a blackout window of 14 days extending before and after the date such report is transmitted to clients or released to the market.

Cautionary Note to U.S. Investors Concerning Estimates of Measured, Indicated and Inferred Resources: RCR publishes mineral resources based on standards recognized and required under securities legislation where listed mining and exploration companies make their exchange filings and uses the terms “measured”, “indicated” and “inferred” mineral resources. U.S. investors are advised that while such terms are recognized and required under foreign securities legislation, the SEC allows disclosure only of mineral deposits that can be economically and legally extracted. United States investors are cautioned not to assume that all or any part of measured, indicated or inferred resources can be converted into reserves or economically or legally mined. We recommend that US investors consult Securities and Exchange Commission Industry Guide 7 – “Description of Property by Issuers Engaged or to Be Engaged in Significant Mining Operations” for further information about the use of defined terms and the presentation of information included in this report.
