The Weekly Outlook – 24th January 2011

This is the 8th week in a row that the Dow finished up which should make investors nervous of a potential pullback. Other global markets haven't been so lucky but then again they are experiencing their own problems. The US economy seems to be recovering nicely albeit slowly, and recent economic data supports that view. Will this rub off on other economies is another question as circumstances are quite different. Europe relies on its members to work in unison and if a cog is out of place such as Greece, Ireland or others then the machine doesn't function very well. Australia and Asia face the inevitable inflation and but more importantly for Australia is the Chinese reaction to its fight with inflation.

Last week saw the major miners deliver their quarterly production numbers and it wasn't surprising to see that BHP and RIO do well on the back of their magnificent iron ore operations. The outlook from both was again subdued and cautionary although optimistic. The consensus points to strong coal and iron ore price in the short term which would deliver more joy for the producers. Copper is the beacon which will point the way on the direction commodities head.

Gold has been sliding on the back of US economic recovery and US dollar strength, but I wouldn't abandon gold yet as we are not out of the economic quagmire and inflation could surprise, especially since we are seeing it in China, and could spread to the US its largest trading partner.

In our commodities watch space, despite good quarterly results from our big miners, the commodity stocks were weaker overall.

Weekly S&P/ASX200 Stock News**Minara Resources (MRE) - Minara Resources Provides December 2010 Quarterly Activities Report**

Minara Resources provided its December 2010 quarterly activities report, reporting that total production of 6,508t of packaged nickel and 448t of packaged cobalt was achieved at Murrin Murrin for the three months to 31 December 2010. The company's share is 60%. As anticipated, metal production was impacted by the three-week planned triennial statutory shutdown. The plant recommenced production without incident. Autoclave feed for the quarter was 623,920t of ore @ 1.29% Ni. Production guidance for the 2011 calendar year at Murrin Murrin is 33,000-37,000t of nickel.

Panoramic Resources (PAN) - Panoramic Resources Provides December 2010 Quarterly Activities Report

Panoramic Resources provided its December 2010 quarterly activities report, reporting at Savannah, production was 1,392t Ni, 796t Cu and 80t Co; concentrate shipments totalled 19,062t containing 1,435t Ni; and aggregate site costs were down 16% on the previous quarter, payable cash costs of US\$7.51/lb Ni. The Company reported at Lanfranchi, Ni in ore produced was up 16% on the previous quarter to 2,650t; payable cash costs of US\$6.02/lb Ni; and ruling by SAT in the Company's favour enabled the Company to build an on-site accommodation village. The Company also reported group production was 4,042t Ni, down marginally on the previous quarter.

Rio Tinto (RIO) - Rio Tinto Provides Fourth Quarter 2010 Operations Review

Rio Tinto provided its fourth quarter 2010 operations review, reporting Rio Tinto's global iron ore operations set a new quarterly production record at 65Mt (50Mt attributable) and a new annual record at 239Mt (185Mt attributable). Mined and refined copper were down 9% and 6% on the fourth quarter of 2009 and down 16% and 5% on full year 2009, in line with previous guidance. Bauxite production increased 9% year on year in line with higher demand. Alumina and aluminium production were broadly flat. Australian hard coking coal production was up 8% on the fourth quarter of 2009 and rose 20% on full year 2009, following increased investment at the Queensland operations. Australian thermal coal production was down 9% overall for the year, mainly due to wet weather in the Hunter Valley. The force majeure declaration at the four Queensland coal mines remains in place. All the Queensland coal mines are operational but are still constrained in some way by weather impacts, including the impact on third party infrastructure. Rio Tinto is currently unable to provide an estimate of the full impact of this adverse weather or the duration of the force majeure declaration.

BHP Billiton Limited (BHP) - BHP Billiton Provides Production Report for Half Year Ended 31 December 2010

BHP Billiton provided its production report for the half-year ended 31 December 2010, reporting that petroleum production of 80.34m BOE was in line with the December 2009 half-year as the successful ramp-up of Pyrenees (Australia) was offset by the deferral of production well drilling in the Gulf of Mexico and severe flooding in Pakistan. In addition, record iron ore production and shipments were achieved for both the half-year and quarter. WA iron ore shipments rose to an annualised rate of 148Mt per annum in the quarter (100% basis). Other quarterly production records were achieved at Hunter Valley Energy Coal (Australia) and the Alumina refinery (Brazil), while both Olympic Dam (Australia) and Antamina (Peru) reported record milling rates.

*consensus estimate

Wesfarmers (WES) is Australia's best known and most successful conglomerate. Activities span hardware/home improvement, supermarkets, discount department stores, coal mining, LPG manufacture and distribution, industrial and safety supplies, chemicals, fertilisers, general insurance and insurance broking. Business interests can be divided into two broad groups: Retail operations, and Industrial and other operations. (Aegis)

The 2008 acquisition of Coles Group effectively doubled the size of the group. WES is now one of Australia's largest retailers with annual sales from hardware/home improvement, supermarkets and discount department stores exceeding \$45bn. Over the past decade EPS CAGR has been 8.1% while DPS CAGR has been 6.3%. (Aegis)

Wesfarmers has been able to fund organic growth and selective acquisitions without issuing new capital by sound management of operating cash flow and selective divestments from the operational portfolio. However the sheer size of the Coles acquisition did require a substantial equity issue. (Aegis)

The acquisition of Coles has increased the percentage of more predictable revenue, cash flow and profits from home improvements and supermarkets to around 50% offsetting the more volatile operations such as coal. (Aegis)

While the supermarket sector is competitive the acquisition of Coles gave Wesfarmers an immediate 30-35% market share. This would be almost impossible to replicate from start-up and provides significant exposure to necessities retailing which tends to be insulated from contractions in economic activity. Through Bunnings, Wesfarmers has the largest market share in the strongly growing hardware/home improvement/DIY sector. K-mart and Target provide significant market shares in the discount department store sector. (Aegis)

Coles was badly managed and under invested for many years prior to acquisition and a significant change was required. A meaningful and sustainable business improvement will take time to restore significant value to the numerous brand names and franchises. A focus on retail basics is required including a complete overhaul of supply chain strategies, reinvigorating management - introducing responsibility and accountability, lifting staff morale, improving customer service and value and a significant upgrading of the IT platform from distribution centres to point-of-sale. This is a five year program. (Aegis)

Bull Points

- The turnaround of Coles supermarkets is gaining traction.
- Increasing and more predictable retail earnings are offsetting the more volatile contribution from resources (coal).
- The refinancing of the Coles-related bridging debt has been successful and the balance sheet restored.
- Bunnings continues to perform strongly and is leveraging an increasing market position.
- Management has an excellent acquisition record and while Coles is by far the biggest retailing experience at Bunnings provides comfort. (Aegis)

Bear Points

- Coles has been badly managed and significantly under invested for a decade. It will require significant additional capital and an enormous amount of management time to turn around.
- Paid a high price for Coles after taking an early position although no competitive bids emerged.
- The company is fortunate that coal prices have surged - FY09 - otherwise the timing of the Coles acquisition could have had serious consequences.
- Management is spread too thinly across the conglomerate. There has been a greater than normal loss of senior management over the past two years. (Aegis)

VENTUREX RESOURCES (VXR)
\$0.14c
Analyst: Peter Kopetz
SPEC BUY
Intrinsic Valuation: \$0.28c
Price Target: \$0.20c

Venturex Resources (VXR) is undergoing a transformation through the acquisition of Panorama Cu-Zn project which will complement current assets in the area. Panorama is the largest known VMS deposit in the Pilbara with mineral resources of 19.3Mt @ 2.2 Cu Eq, which with VXR's own Whim Creek project gives combined mineral resources of 27Mt @ 2.2% Cu Eq. Panorama has cost VXR \$26.2M plus off-take rights capped at 230T of zinc from Panorama at benchmark pricing. The acquisition will be funded via a institutional placement and an underwritten 2:5 rights issue at \$0.9c a share. Our modelled mining scenario places a value of ~\$0.28c per share post capital raising.

- Panorama Cu-Zn project has a JORC mineral resource of 19.3Mt @ 1.2% Cu & 3.2% Zn. Previous studies demonstrated excellent metallurgy to produce high quality Cu & Zn concentrates.
- Whim Creek has a JORC mineral resource of 7.6Mt @ 1.2% Cu & 2.2% Zn. Combined VXR's JORC mineral resources stand at 27Mt @ 1.2% Cu & 2.9% Zn.

- A mining scenario sees a combined 1Mtpa operation producing 16Kt of copper and 40Kt of zinc per year, which compares favourably to Jabiru Metals (JML) 9ktpa Cu & 25Ktpa Zn.
- C1 cash costs (Whim Creek) are forecast to sit around the US\$0.50c/lb (after credits) which is similar JML and puts in the lowest cash quartile. Mine life combined, on reserves alone is ~9 years and potential exists to extend that substantially as the area is clearly a VMS camp.
- Target production is slated for 2013, giving VXR 18-24 months before it joins the ranks of producers.
